INSULATION BLOWERS

Star Machine offers a number of insulation blowing machines to suit the needs of any professional insulation contractor. We have four models that are our most common builds including the MiniStar 1213, FiberStar 1620, SuperStar 1620, and the SuperStar Supreme 2024. A 150' wired remote comes standard with all insulation blowers but we do offer an add-on wireless remote with a range of over 200 feet that replaces the wired remote. Standard machines also come with a double finger shredder system for effective insulation material separation, we also offer a four finger shredder system that is designed to more effectively shred, and then spread insulation material further to increase your yield by over 10%.

All Star Machine insulation blowers come standard with heavy gauge steel construction, an adjustable gate that allows material to reach the air lock, heavy-duty quick-change seals, and a limited two-year warranty against manufacturers defaults.

Our bestselling insulation blower is the SuperStar 1620 with both of the add-ons listed above selected. With a reliable Genuine Honda® GX630 Engine this insulation blower has over 20 HP to put to moving, shredding, and blowing your chosen insulation material as effectively as possible, and with the legendary build quality of both Star Machine and Honda, you know that a Star Machine will last as long as possible too.

The SuperStar 1620 has an open-blow output of up to 4000 lbs/hour of cellulose insulation, 2000 lbs/hour of fiberglass insulation, and 3000 lbs/hour of rockwool insulation.

SUPERSTAR 1620

Our largest insulation blower is the SuperStar Supreme 2024 powered by a Genuine Honda® GX690 Engine, supplying over 24 HP to the auger, shredders, and blower to maximize your output every day.

The SuperStar Supreme 2024 is a high-volume machine that is ideal for insulating attics and other large spaces with its large hopper capacity of 50 cubic feet, and its output capabilities of 4725 lbs/hour of cellulose insulation, 2300 lbs/hour of fiberglass insulation, and 3500 lbs/hour of rockwool insulation.

SUPERSTAR SUPREME 2024
